

2011-12 State Budget Impact Estimates for Nursing Homes

Provider specific impact estimates of those cuts included in the 2011-12 state budget that can be attributed to individual homes are available [here](#). They include the 12month impact of eliminating a 1.7 percent trend factor and the impact of a 1.2 percent un-reimbursable cash receipts assessment. The trend factor cut is effective 1/1/12 and represents an addition to the rate that will not be made (rather than a reduction of the current rate). Impact estimates are calculated using rebased rates that reflect a 1/1/2010 case mix. The assessment impact is calculated using 2009 reported revenue.

The impact estimates of the Rebasing Mediation Plan are available [here](#).
